

# Smarter Ways To Save

## 1 Grey to Brown

**Your brown bin is cheaper than the grey bin**, plus it has a higher kilogram threshold. By diverting eligible items such as food and any other organic materials from your grey into your brown bin you can reduce your grey bin's weight. And lighter bins mean lighter bills!

## 2 Watch out for Garden Waste

You need to be careful if you are using your brown bin for a lot of garden waste. **Garden waste typically weighs more than food waste** (especially when damp or wet) and without realising it, can cause the weight of the bin to creep up. One approach many customers adopt is to engage in some home composting.

## 3 Smarter Recycling

**Only clean Paper & Cardboard, Rigid Plastic, Tins & Cans are acceptable.** Anything else in the green bin will actually cause the load to be contaminated and sent to landfill. Make sure items are clean, dry and placed loosely in the bin. Remember, if it's not on the list, it doesn't go in your green bin. Happy recycling!
